PARTRIDGE  
TRANSFORMERS LTD.

D.N. Williamson, under the name "Design for a High-quality Amplifier,"  
became known as the "Williamson Amplifier," was an early example of  
auto amplifier (the commercial LEAK "Point One" Type 15 amplifier of 1935).  
The design became widely known for its notably high quality of its audio  
output. Williamson amplified the design for his own use and for sale, follow-  
ing the lead of the original design. The design was published in the  
simplicity of the design.
